Junyi Qian

jqian320@gatech.edu / +1 (470) 626-3494 / Atlanta, GA
Availability: May 10–August 31, 2027 (3 months)

EDUCATION

Georgia Institute of Technology — Atlanta, GA
M.S. in Computer Science — Aug 2026 – Expected in Jun 2028

South China University of Technology (SCUT) — Guangzhou, China
B.S. in Financial Technology (GPA: 3.82/4.0, Major Ranking:Top 10%) — Sep 2022 – Jun 2026

- Relevant Coursework: Database System, Operating System, Data Structures, Cloud Computing and Storage, Introduction to Artificial Intelligence, The Structure and Interpretation of Computer Programs
- Awards: SCUT-Trauer Biotechnology Scholarship (Oct 2024), SCUT 2nd-Class Scholarship (Oct 2023)

INTERNSHIP EXPERIENCE

Kornet Environmental Technology — Guangzhou, China
Software Engineering Intern — Apr 2026 – Jul 2026

- Architected a production-grade user-intent recognition and agent orchestration platform for an AI assistant across the USV product line, supporting 20+ user intents and 15+ reusable skills.
- Implemented LLM-based intent classification, structured outputs, LangGraph workflows, and MCP-compatible tool adapters, improving task-routing accuracy by 18% and reducing invalid tool invocations by 30% versus prompt-only baselines.
- Benchmarked Microsoft Agent Framework, CrewAI, AutoGen, and LangGraph across latency, task-completion rate, failure recovery, state persistence, observability, and human-in-the-loop support.
- Defined agent-skill roadmap and engineering cookbook, and developed containerized WDP and VLM reference implementations using FastAPI, Docker, Kubernetes, Redis, vector search, and OpenTelemetry.

Kornet Environmental Technology — Guangzhou, China
Software Engineering Intern — May 2025 – Aug 2025

- Developed an intelligent pollution source monitoring system using Spring Boot and React, providing real-time pollution data, email alerts, phase analysis results, and CRUD operations on PostgreSQL.
- Integrated Redis cache into the monitoring system for aggregated sensor data, pollution threshold value, and alert notification status with LRU policy, increasing GET request speed by 27%.
- Developed email alert features using RabbitMQ to notify users of pollution levels, optimized by configuring prefetch count, persistent messaging, and implemented retry logic to handle failed message deliveries.
- Established a Spring Cloud configuration server with cache configuration for git repo and Spring Boot actuator for health monitoring, containerized the web app with Docker, and deployed it on Kubernetes.

Tencent — Shenzhen, China
Integrated Project Management Intern — Jul 2024 – Aug 2024

- Wrote SQL queries joining order, reservation, and fulfillment tables to compute fulfillment rates and lead-time metrics for GPU reservation orders across cloud computing and AI service lines.
- Developed Python scripts to clean and aggregate raw order logs, then built pivot-table-based dashboards in Excel to visualize GPU utilization trends by GPU type and region.
- Analyzed supply-demand patterns across GPU types, identifying a ~15% utilization gap between high-demand and underutilized GPU types, and presented insights to the infrastructure and business teams to inform cloud resource scheduling optimization and capacity planning.

RESEARCH

Corporate Public Opinion Monitoring and Analysis Based on Video Big Data
Co-Researcher — Feb 2024 – Mar 2025

- Built a Python web-scraping pipeline to collect, clean and structure over 1 million stock-forum posts and comments.
- Fine-tuned FinBERT forsentiment classification and developed keyword features, then engineered a crowding-based factor via feature engineering and LightGBM gradient-boosting model to optimize an ETF trading strategy.

RELEVANT SKILLS

Programming: Python, C++, Java, JavaScript, SQL, MATLAB
Machine Learning & AI: PyTorch, TensorFlow, LangGraph, LightGBM, FinBERT, MAF, NumPy
Frameworks & APIs: Spring Boot, React, FastAPI, RESTful APIs, MCP
Databases & Infrastructure: PostgreSQL, MySQL, Redis, RabbitMQ, AWS, Docker
